Summary

Entry-level AI Software Engineer with hands-on experience developing intelligent applications using Large Language Models (LLMs), Vision-Language Models (VLMs), and Machine Learning. Skilled in Prompt Engineering, Agentic AI, Retrieval-Augmented Generation (RAG), OpenAI Agents SDK, semantic evaluation, and model fine-tuning. Experienced in building AI-powered backend applications using FastAPI, LiteLLM, Docker, PostgreSQL, and RESTful APIs, with a strong foundation in model evaluation, and scalable workflow design. Passionate about Generative AI, intelligent automation, and building production-ready AI systems.

Education

Amrita Vishwa Vidyapeetham

2024 – 2026

Master of Computer Applications (MCA) – Specialization in Artificial Intelligence and Data Science – Amritapuri, Kerala
CGPA: 7.68/10

Bangalore City University

2020 – 2024

Bachelor of Computer Applications (BCA) – CGPA: 7.09/10
Bangalore, Karnataka

Technical Skills

- Programming & Scripting:** Python, Java
- AI:** Machine Learning, Deep Learning, Large Language Models (LLMs), Vision-Language Models (VLMs), Prompt Engineering, Agentic AI, OpenAI Agents SDK, Retrieval-Augmented Generation (RAG)
- Frameworks & Libraries:** FastAPI, Node.js, Express.js
- Web & Frontend:** HTML, CSS, JavaScript, Angular
- Databases:** MySQL, MongoDB, PostgreSQL
- Tools & Version Control:** Git, GitHub
- Development Concepts:** REST APIs, Debugging, Software Development Life Cycle

Experience

Wissen Infotec | April 2026 – July 2026

- Developed and enhanced backend RESTful APIs for LiteLLM, implementing CRUD operations for Atomic Team and Atomic User management.
- Integrated enterprise AI platforms by configuring Langfuse with Claude Code, implementing secure authentication, tracing, and routing mechanisms.
- Researched and built AI agent workflows using LangGraph, OpenAI Agents SDK, Claude Agent SDK, and Databricks Mosaic AI for agent orchestration and deployment-ready solutions.
- Enhanced backend security and reliability by implementing S3 URL validation, bucket allowlists, and secure pre-signed URL generation while collaborating with teams using Git and GitHub.

Projects

LLM-Based Activity Diagram Generation & Extraction | Python, LLMs, Vision-Language Models

2025–2026

- Developed an AI module to generate UML activity diagrams from natural language using Large Language Models.
- Built a Vision-Language Model pipeline to extract structured workflows from activity diagrams.
- Preprocessed and validated datasets for semantic evaluation and workflow generation.
- Handled complex workflows including loops, concurrency, and conditional branches.
- Evaluated model performance using custom semantic and structural metrics.

Healthcare Portal with ML-based Parkinson's Detection | Angular, Node.js, MongoDB

2024

- Designed and developed a full-featured hospital management system with a user-friendly interface.
- Implemented modules for patient records, appointment scheduling, and admin-staff coordination.
- Integrated a **machine learning**-based Parkinson's disease detection feature using biomedical input data.

Publications

Comparative Structural and Semantic Evaluation of Fine-Tuned Large Language Models for UML Activity Diagram Generation

2026

ICSSAS 2026 (IEEE Co-sponsored Conference)

- Developed an AI-driven approach for automated UML activity diagram generation from textual software requirements.
- Performed comparative evaluation of fine-tuned Large Language Models using custom structural and semantic evaluation metrics.
- Analyzed AI model performance to improve workflow generation accuracy and software engineering applications.

Certifications

- Software Engineer Intern Certification – HackerRank (2025)
- React.js AI Chatbot built with ChatGPT, Gemini and DeepSeek – Udemy (2025)

Additional Information

- Soft Skills:** Adaptability, Teamwork, Communication, Problem Solving
- Interests:** Artificial Intelligence, NLP & LLM Research, Intelligent Systems, Software Development, Agentic Ai
